

COMMERCIAL CARE & MAINTENANCE

Interior Windows

- After installation, if there is a hazy or foggy look to the film, this is due to the mounting solution moisture under the film. This is normal and should dissipate naturally over the course of a few days, depending on your climate conditions. Please contact XPEL if you have any concerns.
- Due to the less porous nature of window film, the surface will attract less dirt and will be simpler to clean. We recommend using XPEL Glass Cleaner or a mild dishwashing detergent and water mixture in a spray bottle. Please refrain from using harsh cleaning products. Please only use soft microfiber clothes or paper towels to clean the window film.
- While the window film is typically maintenance free, you can follow the below guidelines to keep your film looking new for years to come. For interior films we recommend a silicone polish to keep a fresh polished clean surface. Suggested products include: Plexus Plastic Cleaner and Solar Majik.
- If you need to remove adhesive tape from the window film surface, peel the tape as if it were adhered to the glass surface. If you have adhesive left behind, you can remove with a soft microfiber cloth and mineral spirits or isopropyl alcohol. If the two previous chemicals do not work, we suggest using acetone on a soft microfiber cloth.

Exterior Windows

- Exterior Window Films are typically cleaned by a professional window cleaning company. Please do not use bristle brushes or aggressive cloths, as these cleaning tools will damage the film and possibly void your warranty (if applicable). We recommend using a soft microfiber cloth with a mild detergent and water solution mixture. To help prevent water spotting, you may use a squeegee to remove the water.
